

Game Product Owner with 7+ years of experience in game development, product delivery, live-service systems, and cross-functional team coordination. Strong background in Unity game production, with hands-on experience across mobile, PC, WebGL, backend-integrated features, monetization, analytics, and release management.

Experienced in defining product requirements, prioritizing feature backlogs, managing release readiness, resolving scope conflicts, and translating gameplay ideas into actionable development tasks. Able to bridge product, design, engineering, art, and QA teams to deliver playable features under real production constraints.

Previously acted as Product Owner for mobile game projects, covering requirement definition, backlog prioritization, internal release planning, Firebase analytics tracking, gameplay progression review, and monetization event monitoring.

Key Strengths

- Product requirement definition and feature breakdown.
- Product backlog management and prioritization.
- Gameplay loop, progression, economy, and monetization understanding.
- User flow review and acceptance criteria writing.
- Cross-functional collaboration with design, art, engineering, QA, and stakeholders.
- Scope control, conflict handling, and milestone risk management.
- Internal release planning, build verification, and QA feedback coordination.
- Firebase analytics tracking for retention, progression, and monetization events.
- Strong technical background in Unity, backend integration, and live-service systems.

Experience

Freelance Unity Developer / Product-Oriented Game Developer, Freelancer

May 2024 – Present

- Worked directly with international clients to clarify product requirements, define feature scope, and translate ideas into actionable tasks.
- Delivered multiple Unity projects from prototype to release across RPG, Idle, Puzzle, and Casual genres on mobile, PC, and WebGL.
- Designed gameplay systems, progression mechanics, monetization flows, and live-service features aligned with player-facing requirements.
- Owned end-to-end delivery: planning, architecture, implementation, optimization, testing, and deployment.
- Evaluated feasibility, reduced delivery risk, and helped prioritize features under production constraints.

Ajna Game Studio, Senior Unity Developer / Technical Lead

Jul 2025 – Feb 2026

- Led development of commercial Unity titles for PC and mobile, coordinating technical execution across gameplay, tooling, optimization, and release.
- Partnered with designers and artists to convert creative direction into playable features, content pipelines, and polished gameplay.
- Supported product delivery by estimating effort, identifying technical risks, and aligning engineering priorities with project goals.
- Introduced AI-assisted workflows to accelerate prototyping, iteration, and content production.
- Managed platform-specific release readiness for Steam, Android, and iOS (build verification, SDK integration, deployment preparation).

Flying Whales, Unity Developer | Remote

May 2024 – Mar 2025

- Developed Android/iOS gameplay features in Unity based on product and design requirements.
- Implemented gameplay systems, UI, and live-service integrations; supported testing, release preparation, and post-release improvements.
- Built automated build and deployment pipelines with GitHub Actions and Jenkins to reduce manual release effort.
- Improved team workflows through automation and tooling to increase iteration speed and delivery reliability.

WingsMob, Game Product Owner / Unity Developer

May 2023 – May 2024

- Acted as Product Owner for a Survivor.io-like action roguelite mobile game, defining gameplay requirements, feature scope, user flows, and acceptance criteria.
- Managed the product backlog across core combat, enemy waves, character progression, skill systems, backend integration, live-service readiness, purchase validation, and cloud-synced player data.
- Prioritized features by balancing player experience, design goals, technical complexity, production capacity, and milestone risk.
- Translated product and design requirements into actionable engineering tasks, ensuring implementation aligned with gameplay goals and technical constraints.
- Resolved scope and priority conflicts between design, art, and engineering teams to keep milestone delivery realistic.
- Managed internal release planning, build verification, QA feedback, bug triage, and Android/iOS delivery readiness.
- Integrated Nakama and AWS-based systems to support live-service features, progression tracking, secure purchase validation, and cloud-synced data.
- Built internal tools that improved designer productivity and content iteration speed.
- Optimized combat systems, enemy spawning, runtime performance, and memory usage on mobile devices.

Super Snowball, Co-Founder / Game Product Owner | Hanoi, VN

Jan 2022 – Dec 2022

- Led product and technical development of mobile game projects from concept and prototype through production, testing, and release preparation.
- Defined gameplay loops, level progression, monetization flows, analytics events, feature scope, and development priorities for early-stage mobile game projects.
- Coordinated design, art, engineering, and QA work to align product direction with team capacity and production constraints.
- Managed roadmap, milestone planning, scope control, and technical risks for a small cross-functional game team.
- Set up and monitored Firebase Analytics for early-stage testing (first opens, retention, level progression, rewarded ads, interstitial ads) to evaluate player behavior and identify improvement opportunities.
- Used analytics signals to review gameplay pacing, level difficulty, ad placement, retention flow, and player progression behavior.
- Converted Firebase observations into iteration ideas for gameplay balance, monetization flow, and future content updates.

Bazooka, Unity Developer | Hanoi, VN

Aug 2020 – Dec 2021

- Developed gameplay systems, UI features, and monetization integrations across multiple mobile titles.
- Integrated Firebase, AdMob, AppLovin, analytics, and in-app purchase flows; implemented tracking events and ad placements.
- Collaborated with designers and QA to improve feature quality, stability, and user experience.

Rikkeisoft, Game Developer | Hanoi, VN

Apr 2019 – Aug 2020

- Developed arcade and casual games using Unity.
- Built browser-based mini-games using PhaserJS.
- Collaborated with designers and QA teams on gameplay implementation, UI flow, testing, and stable releases.

Skills

Analytics & Live Operations	Product Ownership	Product Requirement Definition, Feature Breakdown, Backlog Prioritization, Acceptance Criteria, User Flow Review, Roadmap Support, Scope Control, Conflict Handling, Stakeholder Communication, Release Readiness, QA Feedback Coordination
	Game Product	Gameplay Loop Analysis, Level Progression, Game Economy Support, Monetization Flow, Rewarded Ads, Interstitial Ads, Live-Service Features, Player Progression, Content Update Workflow, Mobile Game Production
		Firebase Analytics, Event Tracking, Retention Review, Level Progression Tracking, Monetization Event Monitoring, Player Behavior Analysis, Early Product Validation
	Technical Background	Unity Engine, C#, DOTS/ECS, Gameplay Architecture, Unity Editor Scripting, Addressables, ScriptableObjects, Object Pooling, Profiling & Optimization, REST APIs, JSON
	Backend & Services	Nakama, AWS, Firebase, Cloud Save, Purchase Validation, Multiplayer Integration, Player Data Systems
	Release & Tools	Steamworks SDK, Google Play, App Store, Git, GitHub Actions, Jenkins, Docker, CI/CD, Build Automation
	Programming Languages	C#, C/C++, JavaScript, Java, Lua
	Databases	MongoDB, MySQL

Projects

Sweetoria Land | Ajna Game Studio

2025

- Built a responsive 3D character controller powered by a unified input system, abstracting the control logic to effortlessly accommodate keyboard, Xbox, and PlayStation gamepads.
- Designed and developed five unique, large-scale environments, overseeing intricate scene composition and asset distribution to deliver highly immersive 3D worlds.
- Managed the Steam release pipeline, overseeing build verification, version deployment, and the integration of Steamworks SDK.

Tap Legion: Idle Clicker RPG | Freelancer

2025

- Implemented a robust data framework to handle high-volume progression curves and entity stats, enabling rapid iteration of the game's infinite difficulty scaling.
- Designed the central gameplay loop to fuse multiple genres, carefully balancing the fast-paced “Tap-to-Spawn” combat with the deeper, long-horizon idle economy systems.

Dino Jam – Parking Puzzle Game | WingsMob

2023

- Developed backend-integrated gameplay features using Nakama and AWS to support live-service operations.
- Implemented secure purchase validation, player progression tracking, and cloud-synced game data.
- Optimized puzzle systems and runtime performance for Android and iOS devices..
- Worked closely with designers and artists to deliver content updates and improve player experience.

Education

Bachelor of Information Technology, University of Engineering and Technology (VNU) | Hanoi, Vietnam

2014 – 2018
